Scott,

The request to START was to provide technical assistance for optimizing the existing temporary water treatment and planning for continued water treatment and technology evaluation. He provided advice on treatability and related testing procedures that were used to adjust treatment operations in the early stages of the response. At the time, Dave Robinson through Jan and Elliott had not identified anyone to fill that function.

Construction safety assessment : Rick Ehat through communications with the US BOR provided an immediate engineering evaluation of the site relative to stability and safety of heavy equipment operations on and around the mine dump, the portal and related operations. He provided recommendations for short-term actions to enhance the contractor's efforts to stabilize areas with road and waste dump instability or related hazards due to the mine discharge and impacts on ground conditions.

Let me know if this is what you needed.

Steve

Subject: Neville Kingham and Rick Ehat

Steve,

Hope you are able to get some down time this week!

Hate to bother you but I'm trying to flesh out some procurement files for the GKM response.

In particular I need to specify the SOW for Neville Kingham and Rick Ehat.

Would you please give me a short blurb for each so that we can include them in our files?

Thank you!.

-Scott
